MARMA is an anatomical area where all the five anatomical structures, muscle, vessel, ligament and nerves, bones, and joints are collectively present which are having secret and significant life values, where Pra resides. MarmaVijñān is an extremely extensive research oriented and useful part of anatomy as it studies, the specific types of trauma at different parts of body as well as incidents occurring during various surgeries, removal of varied types of foreign bodies from various areas of body, warfare wounds, attacks by wild animals and the various problems occurring during pañcakarma therapy. Surgically marma vigyan is of more useful, as injured effect of marma sthanamay lead to loss of life immediately or later, or result in deformity of a specific area of the body. The knowledge of marmavijñān explained elaborately by Suruta, is to avoid confusion during surgery.

It is important that, only the structural knowledge or morphological information on the marma factors is not enough, but the understanding of minute informations on gross and microscopic anatomy are also necessary to become a good physician/surgeon. Marmaara is also dependent on the clinical experience.
